

**Vietnam** - Dr. Robert Wayne Van Devender /Biology / 262-6907 / [vandevenderr@appstate.edu](mailto:vandevenderr@appstate.edu)

The program provides students with both classroom and field experience in dealing with the problems of biodiversity, conservation, and biogeography as applied to Vietnam in southeastern Asia. Courses focus on forces causing regionally distinct fauna and flora, modern threats to this biodiversity, and steps being taken to safeguard this biological heritage for future generations. After classroom introductions to these issues, students will meet and interview governmental, non-governmental, and field workers dedicated to identifying and solving these problems.
